

Here's What's Happening at JUBILEE

Kindergarten focused on working with numbers in the teens. To finish up our math lessons we practiced writing each number and showing it by filling in our tens frame. We used candy corn to tie in our food unit and the season. We talked about how it is probably not our most healthy choice of food, but in moderation it tastes pretty yummy 😊

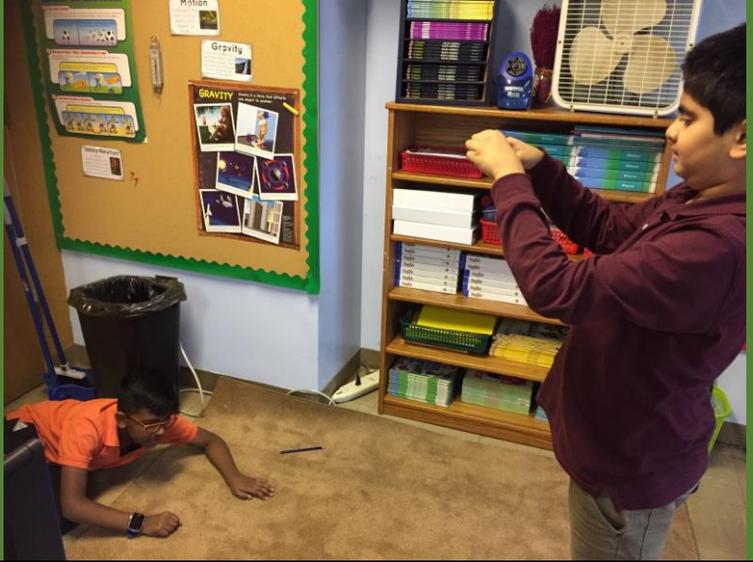

First Grade began their study of transportation. They had the opportunity to observe the traffic light at the intersection in front of school to see what the colors mean and learned about how the lights are programmed. They also learned about adding three addends and got to play StopLight Math!

Mrs. McGinley visited second grade to tell them about the Native Americans that lived in Pennsylvania. Did you know that the Three Rivers are named after Native Americans tribes?

Third grade had an amazing field experience last week. They were invited to visit the Scientific Glass Blowing Lab at the University of Pittsburgh. They got to see how specialized laboratory equipment is made, learned about the art and science of glass blowing, took a tour of the lab, and even had the chance to BLOW and BREAK their own glass bubble! It was a day they will not soon forget!!

What a great week in 4th grade! The students started physics with an introduction to force and motion, and participated in an activity to explore the force of gravity. They also began learning about earthquakes, and are reading a new unit book about the famous San Francisco earthquake of 1906.

Fifth and Sixth grade have been in awe of God's incredible design in the immune system. While we have seen the devastating effect of the fall in our bodies, we've also been amazed at how good God is to provide us an incredible defense system. This week, we decided to see just how well we're doing at keeping our hands pathogen free. Needless to say that our results have prompted much more rigorous hand washing!
