

Here's What's Happening at JUBILEE

What a fun and exciting first week of school we had at Jubilee! All of those sweet, smiling faces were surely an indicator of a GREAT start to an AWESOME school year! We are so thankful for all of the ways God has been providing for us all!

Thanks to a successful RISE UP campaign last year, focused on enriching our STEAM Education, we have some exciting new additions to our SPECIAL CLASSES programs this year.

SNAPOLOGY STEM program will be coming to Jubilee every Monday again this year to engage the students in Lego, Robotic, and Engineering activities!

We are beyond thrilled to announce that KATHY'S MUSIC will be partnering with Jubilee this year to provide top-notch music education to our students.

Many of our students participated in our MAD SCIENCE after-school program in the past, and this year, through December, ALL of our students in K-6 will be engaged in their hands-on activities that focus on science and engineering practice.

Be sure to look for more details in the weeks to come of the specific activities your children will be doing in these exceptional classes!

We are excited to welcome all of our new KINDERGARTEN students to our Jubilee Family! They had two great days of fun and learning!

First Grade had the opportunity to do a science experiment and make slime! We used teamwork to discuss and decide what color to make and practiced taking turns as we mixed the glue, baking soda and contact solution.

In second grade we are getting the "Scoop" on how God made each of us so unique and special! We wrote our interests and other things about ourselves on our scoops of ice cream. We will be putting them together on our bulletin board to show that when all of the scoops are together, it looks so amazing!!

Third Grade met SKINNY the SKELETON this week. He is helping us learn all about the perfect way God has created our muscles and bones to work together. We can already identify our SKULL, RIBS, FEMUR, HUMERUS, VERTEBRAE, AND PHALANGES!

Fourth grade was "ALL SMILES" this week. We had a fun week, and enjoyed beginning our first unit chapter book, Ms. Frisby and the Rats of Nimh.

5th and 6th Grades are in awe of their incredible brains as they begin their unit study. The kids drew a quick picture of one of their favorite things, and then they had to connect how the brain was involved. The first example thrown out, ice cream, threw them for a loop for a moment, but they quickly saw the connection. This led to a great discussion on one of our essential questions: **How does the design of the Nervous System show God's desire to do us good?** We are SO thankful for all the ways that God created our brain to allow us to enjoy and engage the world! Everything COULD taste like cardboard, but our good God allows us to experience such a plethora of flavors, sights, smells, and touches.
