

Here's What's Happening at JUBILEE

It's been another great week at Jubilee! Here are just a few of the AMAZING things going on in our classrooms!

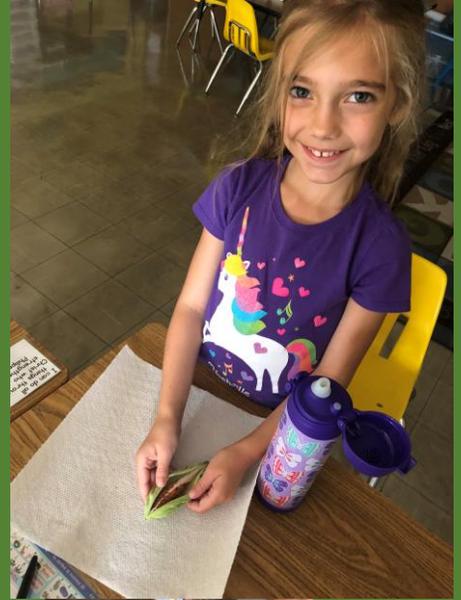

In art class this month, the students will be learning about GOD'S wonderful creation...our bodies!

Kindergarten and first grade will create expressive color portraits based on Henri Matisse. Second and third grades will create optical illusion art handprints. Fourth through sixth grades will study Leonardo da Vinci's Vitruvian Man and figure drawing.

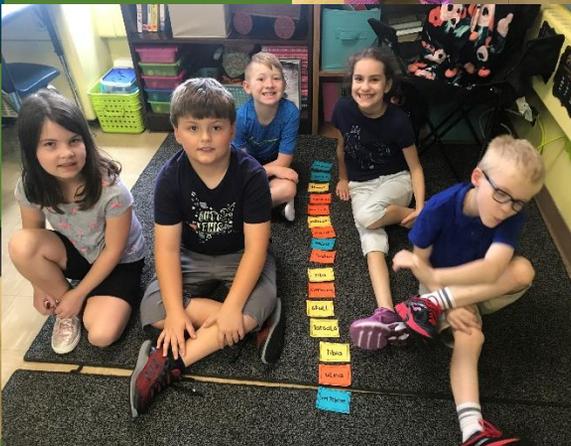

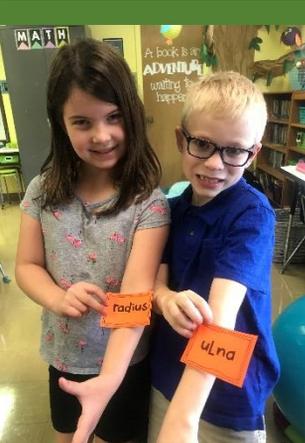

Kindergarten was introduced to the letter people this week. They met Ms. L, Miss T, Mr. I, and Miss W. They have been enjoying having some new friends to help them learn all about the letters of the alphabet. They are anxiously awaiting more visits from **Letter People Land** in the coming weeks!

First Grade has been learning about what God created during each day of Creation. This week, we discussed God creating every different kind of plant on the third day. We were blessed by Mrs. Philipp bringing these milkweed seed pods for us to explore. We even had the opportunity to get a jump on our May unit—did you know monarch butterflies eat milkweed so they are poisonous to the animals that eat them?

This week in 2nd grade we had fun using magnifying glasses to look more closely at our tongues! We praised God for giving us all 10,000 taste buds

Third grade integrated our Unit study into a Language Arts lesson about alphabetical order. The students were given cards with the name of a bone on them. They had to first locate the bone on their body, and then, put the cards in alphabetical order. They were ready and excited for a final challenge.....arranging all of the cards from each set into alphabetical order!

Life Savers, marshmallows and jelly beans ... OH MY!! Who knew identifying and describing each part of the blood could be so much fun. After all of that candy, what could we possibly have for dessert? A dance party, of course!!

Fifth and Sixth grade continued their brain study by giving their brains a real workout! After learning about how the brain processes and learns new information, they went to the roof to test it out. After mastering the hula hoop, the next test was to really ramp up the work for the cerebrum and cerebellum by adding a ball toss. It was quite the challenge, and they are even more in awe of God's incredible design! They also made advertisements for their brains. Think you should buy theirs? Stop by the hallway outside their door to see what is for sale!
