

# Here's What's Happening at JUBILEE

JUBILEE Students had a very special treat on Friday. The KONA ICE truck visited the school. Everyone enjoyed a yummy, cool treat on a beautiful, sunny day!!

Kindergarten has been learning about God's amazing and beautiful creations. They made a flip book of pictures to represent each day of creation. They have enjoyed singing their creation song to help them memorize what He did each day!

First Grade started working on building their STAMINA for Super Quiet Uninterrupted Reading Time (SQUIRT) last week. They are already able to read quietly for four whole minutes at a time! Our goal is 20 minutes.

Second grade learned that the stomach uses its muscles to break down the food and it creates chyme!

The third graders love learning about MUSCLES and BONES so much that they chose to play one of their Unit games during their free time at RECESS! Jubilee's integrated curriculum really fosters a LOVE of LEARNING!

Fourth grade rolled up their sleeves and got super creative this week!! The students used play dough to make the lungs, heart and some very happy body cells. They also used glitter glue to show the path blood takes to different parts of the body.

Unit time for the fifth and sixth graders was full of sensory experiences (like tasting onion while eating apple), but one of Ms. Booher's favorites was helping the kids understand the difference between sensory and motor neurons. To illustrate this, one student sat in a roller chair while another student, with their eyes closed, pushed them. The person sitting had to tell the person who was "driving" how to navigate through small obstacle course. It produced some humorous results, but the kids also saw how incredible the design of our bodies are in the way that our nerves works together.
